The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/642,693

Applicant(s)

SEO ET AL.

Examiner

TAT CHI CHIO

Art Unit

2621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 February 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 3-7, 15, 17-32, 34, 36, 38, 40, 42 and 43 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 3-7, 15, 17-32, 34, 36, 38, 40, 42 and 43 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 1/5/2009 and 3/4/2009
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/12/2009 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 1, 3-7, 15, 17-32, 34, 36, 38, 40, 42, and 43 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1 and 18-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kikuchi et al. (5,870,523) in view of Tsumagari et al. (US 6,480,669 B1).

Consider claims 1, 18, 19, 20, and 21, Kikuchi teaches a recording medium storing an executable data structure for managing reproduction by a reproduction apparatus of at least video data having multiple reproduction paths recorded on the computer-readable medium, comprising: one or more management files for managing

reproduction of the video data by the reproducing apparatus, the management file storing at least one entry point map associated with each reproduction path (Fig. 27-Fig. 29 and Fig. 31-Fig. 33), each entry point map for identifying entry points in the video data for the associated reproduction path (Fig. 29 and Fig. 33), the one or more management files being separate from a data file storing the video data (Fig. 6, Fig. 25, and Fig. 26 show that the management areas (PCI and DSI) and separate from the video data since they are stored in different packs), wherein the entry point map includes path change information for managing changing of reproduction paths by the reproducing apparatus, the path change information having a plurality of fields (col. 27, lines 6-44), each field associated with one of the entry points (col. 27, lines 6-44), and the path change information includes a field for identifying whether a changing reproduction paths is permitted in relation to the associated entry point (Fig. 37A, Fig. 37B, and Fig. 40) and another field for identifying where changing reproducing paths is permitted in relation to the associated entry point (Fig. 29 and Fig. 33), but Kikuchi does not explicitly teach the entry point map mapping a data packet address of each entry point to a presentation time stamp of the entry point.

Tsumagari teaches the entry point map mapping a data packet address of each entry point to a presentation time stamp of the entry point (col. 16, line 66-col. 17, line 5, col. 32, lines 31-38, and col. 33, lines 26-34). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate entry point map that maps a data packet address of each entry point to a presentation time stamp of the entry point to facilitate efficient reproduction operation.

5. Claims 3-7, 17, 22-32, 34, 36, 38, 40, 42 and 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kikuchi et al. (5,870,523) in view of Tsumagari et al. (US 6,480,669 B1) as applied to claims 1 and 18-21 above, and further in view of Sato et al. (5,884,004).

Consider claim 3, Kikuchi and Tsumagari teach all the limitations in claim 1 but does not teach the recording medium, wherein the fields for permitting a change in a same associated reproduction path define one or more units of video data.

Sato teaches the recording medium, wherein the fields for permitting a change in a same associated reproduction path define one or more units of video data (Fig. 20). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate fields for permitting a change in a same associated reproduction path define one or more units for video data to ensure seamless angle change.

Consider claim 4, Sato et al. teach the recording medium of claim 3, further comprising: a data file having at least the video data recorded therein, and at least a portion of the video data being multiplexed on a unit of video data basis (col. 10, lines 16-20).

Consider claim 5, Sato et al. teach the recording medium, wherein the multiple reproduction paths of video data are different camera angles of video data (Fig. 5).

Consider claim 6, Sato et al. teach the recording medium, wherein each unit of video data starts with an I-picture (Fig. 78 and col. 51, lines 60-65).

Consider claim 7, Sato et al. teach the recording medium, wherein each unit of video data starts with a closed group of pictures (GOP) (Fig. 78).

Consider claim 17, Sato et al. teach the recording medium, wherein if the field indicates that changing reproduction paths is permitted in relation to the associated entry point (col. 27, lines 6-44, Fig. 29, and Fig. 33), the another field associated with the entry point indicates start position of the data packet of the video data (col. 27, lines 6-44, Fig. 29, and Fig. 33)

Consider claim 22, Sato et al. teach the method wherein the fields for permitting a change in a same associated reproduction path define one or more units of video (Fig. 20).

Consider claim 23, Sato et al. teach the method wherein at least one portion of the video data is recorded in a data file being multiplexed on a unit of video data basis (col. 10, lines 16-20).

Consider claim 24, Sato et al. teach the method, wherein the multiple reproduction paths of a video are different camera angles of video data (Fig. 5).

Consider claim 25, Sato et al. teach the method wherein the fields permitting a change in a same associated reproduction path define one or more units of video (Fig. 20).

Consider claim 26, Sato et al. teach the method wherein at least one portion of the video data is recorded in a data file being multiplexed on a unit of video data basis (col. 10, lines 16-20).

Consider claim 27, Sato et al. teach the method, wherein the multiple reproduction paths of a video are different camera angles of video data (Fig. 5).

Consider claim 28, Sato et al. teach the apparatus wherein the fields permitting a change in a same associated reproduction path define one or more units of video (Fig. 20).

Consider claim 29, Kikuchi teaches the apparatus wherein if the field indicates that changing reproduction paths is permitted in relation to the associated entry point (col. 27, lines 6-44, Fig. 29, and Fig. 33), the another field associated with the entry point indicates a start position of a data packet of the video data (col. 27, lines 6-44, Fig. 29, and Fig. 33).

Consider claim 30, Sato et al. teach the apparatus wherein the fields permitting a change in a same associated reproduction path define one or more units of video (Fig. 20).

Consider claim 31, Kikuchi teaches the apparatus wherein another field associated with the entry point indicates a start position of a unit associated with the entry point (col. 27, lines 6-44, Fig. 29, and Fig. 33).

Consider claim 32, Kikuchi teaches the recording medium, wherein the data area stores a plurality of clip files (Fig. 6), each clip file is associated with each reproduction path (Fig. 29 and Fig. 33), each clip file associated with an entry point map (Fig. 27-Fig. 29 and Fig. 31-Fig. 33).

Consider claims 34, 36, 38, 40, and 42, Kikuchi teaches the recording medium, wherein the change of the reproduction path is performed if the change is permitted and

a current reproduction path is maintained until a position at which exiting the current reproduction path is permitted (Fig. 37A, Fig. 37B, and Fig. 40).

Consider claim 43, Sato teaches the apparatus further comprising: an encoder configured to encode at least video data having multiple reproduction paths (Fig. 2), wherein the controller is configured to control the optical pickup to record the encoded video data (Fig. 2).

1. Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kikuchi et al. (5,870,523) in view of Tsumagari et al. (US 6,480,669 B1) and Sato et al. (5,884,004) as applied to claims 1 and 3 above, and further in view of Sawabe et al. (6,031,962).

Consider claim 15, Kikuchi, Tsumagari, and Sato teach all the limitations in claims 1 and 3 but do not explicitly teach the computer-readable medium wherein the entry point maps are aligned in time.

Sawabe teaches the computer-readable medium wherein the entry point maps are aligned in time (Fig. 6 and Fig. 7). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to apply the known technique in organizing the entry point maps that are aligned in time to a similar computer-readable medium to improve the structure of the computer-readable medium.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TAT CHI CHIO whose telephone number is (571)272-

9563. The examiner can normally be reached on Monday - Thursday 9:00 AM-5:00 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thai Tran can be reached on (571)-272-7382. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
